

## Well Contractor Service Codes

The well contractor Service Codes identify the work that a contractor is licensed to do.

A licensed well contractor's Service Code may show a combination of classes of work – again, the work a licensed technician(s) employed by the contractor is allowed to do.

The Service Code classes are:

Class 1 - Well Drilling,

Class 2 - Well Digging and Boring,

Class 3 - Other Well Construction, as specified and described on licence

Class 4 - Pump Installation

Class 5 - Monitoring, Sampling, Testing and Non-Power Construction

You may also see the following:

00000 - No licensed Well Technician(s) employed by the Well Contractor

00009 - Refers to Class 5 Exempted Professionals

## Updates to the directory

The directory will be updated regularly, though new entries and changes to current ones may take up to 10 business days to appear. The directory is not to be taken as advice or recommendation of any individual contractor.
