REGIONAL DIRECTOR'S APPROVAL STATEMENT

I am pleased to approve this Interim Management Statement for Coral Rapids Provincial Park.

This Statement will provide direction for the management of Coral Rapids Provincial Park until a Park Management Plan is completed. It will also set the general direction for the preparation of the more detailed management policies that the Management Plan will contain.

# MANAGEMENT STATEMENTS

1. **Issues**

   There are no relevant management issues for this park.

2. **Resource Management Guidelines**

   2.1 Mineral Resources Management

   **Analysis**
   
   The nature reserve status of the park protects it from any form of degrading land use/activity including exploration/mining such as open pit mining.

   **Guidelines**
   
   Geological research may be authorized by the district manager provided that such activity enhances knowledge/understanding of the geological features, and that the results of such work are made available to M.N.R.

   **Recommendation**
   
   That the guidelines be implemented with the approval of the plan.

   Mineral exploration/extraction will not be permitted.

2.2 Wildlife Management

   **Analysis**
   
   The park falls within traplines CC-181 and 189.

   **Guidelines**
   
   As hunting and trapping pose no threat to site values, these activities will be permitted.

   **Recommendation**
   
   That the guidelines be implemented with the approval of the plan and following appropriate changes to regulations under The Game and Fish Act.

2.3 Vegetation Management

   **Analysis**
   
   The park contains no known significant vegetation sites.

   **Guidelines**
   
   Silviculture which enhances the park's geological features will be permitted.

   **Recommendation**
   
   That the guidelines be implemented with the approval of the plan.
2.4 Land Management

<tr>
<td>There is no leased or private land within the park. However, Ontario Hydro has flooding rights on this section of the Aditibi River.</td>
<td>No disposition of land will be permitted.</td>
<td>This guideline is already in effect.</td>
</tr>
</tbody>
</table>

3. Client Services Management Guidelines

3.1 Information: Basic information about Coral Rapids will be produced for geologists and students. Specifically, a small leaflet providing information about access, the park's significance, references, and so forth, using photos, access and geological maps, and text should be adequate.

3.2 Education: Prospective visitors should be warned of the resource's vulnerability to damage from collectors; for example, in any publication which is produced for the park.

3.3 At present, the site is undeveloped and access is restricted to the use of watercraft. This situation facilitates protection of the site from human impact, and will be maintained.

4. Research

The Ontario Provincial Parks Planning and Management Policies describes scientific research policy in nature reserves as follows: (NR-IV-1U).

Scientific research by qualified individuals, which contributes to knowledge of natural ..., history and to environmental management, will be encouraged in Nature Reserves.

All research programmes will require the approval of the Ministry of Natural Resources and must also meet all requirements under applicable provincial and federal legislation. The Ministry may approve the removal of ..., geological samples ..., by qualified researchers .... Approved research activities and facilities will be compatible with protection values ..., in individual Reserves, and will be subject to development and management policies for Nature Reserves unless special permission is given. Sites altered by research activities will be rehabilitated as closely to their previous condition as possible.
APPENDIX 1: NATURAL RESOURCES BACKGROUND INFORMATION

Frey (1980), describes the bedrock geology of the Coral Rapids earth science Nature Reserve as follows.

The sites contain:

(i) the thickest exposed section of the Lower Shale Member of the Williams Island Formation [Paleozoic, Middle Devonian]. Drillcore records describe sections up to 40.9 m thick elsewhere in the Moose River Basin. The candidate site contains a mass of blue-grey, fossiliferous (macro- & micro-) clay shale slumped onto underlying limestone breccia of the Murray Island Formation (0.3 m thick) that overlies 10.5 m of the Moose River Formation limestone and dolomite. The Williams Island Formation presumably fills sinkholes in the underlying formations.

(2) [a] stratigraphic type section of the Kwatabohegan Formation [Paleozoic, Middle Devonian]. This section is the standard reference to the lower part of the Kwatabohegan Formation and its contact relationship with the underlying Stooping River Formation. The Kwatabohegan Formation here consists of four bedding units of medium to coarse grained to finely granular, bituminous, and fossiliferous limestone totalling 10.1 m stratigraphic thickness. 1.3 m of Stooping River Formation limestone conformably underlie the Kwatabohegan Formation at the base of the exposed section.

(3) a complete stratigraphic type section of the Stooping River Formation [Paleozoic, Lower Devonian], also its thickest (13.8 m) surficial exposure in the Moose River Basin. It is a valuable supplement to thinner sections in the designated type area in the Albany River delta. Contact relationships with the underlying Sextant Formation and the overlying Kwatabohegan Formation also are well exposed. The Stooping River Formation consists of eight bedding units of sandy to argillaceous (slaty), brown, and sparsely fossiliferous limestone.

Frey (1980) appraises the park's earth science features as being of national significance (the Kwatabohegan Formation) and provincial significance (the Williams Island and Stooping River formations) according to the above-mentioned rationale.
17 a-h  EARTH SCIENCE NATURE RESERVE FEATURES

a. Area Description
Earth science nature reserves are relatively small, significant or representative areas that are identified to achieve part of the Ministry's protection/heritage appreciation objectives. Across the Cochrane District, eight such sites have been identified outside of provincial parks and park candidates. These areas are:

<table>
<thead>
<tr>
<th>Site</th>
<th>Township</th>
<th>Area (ha.)</th>
<th>Significance</th>
</tr>
</thead>
<tbody>
<tr>
<td>a</td>
<td>Hobson</td>
<td>4.0</td>
<td>Provincial</td>
</tr>
<tr>
<td>b</td>
<td>Hobson</td>
<td>0.7</td>
<td>Provincial</td>
</tr>
<tr>
<td>c</td>
<td>Valentine</td>
<td>1.5</td>
<td>Provincial</td>
</tr>
<tr>
<td>d</td>
<td>Valentine</td>

<td>g</td>
<td>Senish</td>
<td>1.22</td>
<td>National</td>
</tr>
<tr>
<td>h</td>
<td>Wilkie</td>
<td>1.22</td>
<td>National</td>
</tr>
</tbody>
</table>

These various geological features cover an area of 15.96 hectares in total. Six of these areas have reserved flooding rights that are held by Ontario Hydro.

Three of these sites are nationally recognized standard reference sections for various earth science formations. The other five are provincially recognized.

b. Land Use Intent
These areas are being recommended for park status.

Due to the size of the areas, and given the variety of uses that are ongoing within them, it is further recommended that most of the ongoing activities within the areas be permitted to continue. The exception to this would be commercial logging which is not recommended as a continuing use. An outline of those ongoing activities which are recommended for continuation is given in the Land Use Activity section, however it must be realized that in some instances further refinement may be required.

c. Land Use Activity for Area No. 17a-h — EARTH SCIENCE NATURE RESERVE FEATURES
