This table provides essential information about the program data.

Title	LICENSED TOXICS PLANNERS
Abstract	<p>As part of the Restoring Ontario's Competitiveness Act, 2019, the Toxics Reduction Act will be repealed on December 31, 2021. While this change means that certain manufacturing and mineral processing facilities are no longer required to prepare new toxic substance reduction plans, review existing plans, or report on new substances, those with existing plans that meet the thresholds must still report annually for those substances as the program winds down.</p> <p>This list includes all planners who currently hold a valid Toxic Substance Reduction Planner licence to help facilities identify who can help provide services related to reporting annually, until December 31, 2021 when the program ends. Licensed Planners can also provide advice to any facilities voluntarily seeking toxics reduction options.</p>
Status	Completed
