

# Metadata: Lake Simcoe Monitoring

<b>Title</b>	Lake Simcoe Monitoring
<b>Abstract</b>	<p>1. Description The Lake Simcoe lake monitoring program provides measurements of chemical and physical water quality parameters such as total phosphorus, nitrogen, chlorophyll a, pH, alkalinity, conductivity, dissolved organic and inorganic carbon, silica, other ions, water transparency, temperature and dissolved oxygen. Samples are collected biweekly during ice free season.</p> <p>2. Data Use Requirements Data users agree to acknowledge the Ministry of the Environment, Conservation and Parks in all oral and written presentations, disclosures, and publications resulting from any analyses of the Great Lakes Intake Program dataset. There are no restrictions on the publication of work based on analysis of the dataset. A copy of any published work resulting from any analyses of the dataset should be sent to the responsible party listed above so that the utility of the program data can be tracked over time. Data users are asked to apply the normal standards of scientific etiquette when deciding to publish results based substantially on the dataset.</p>
<b>Status</b>	Ongoing
