Title	Risk Management Measures Catalogue
Abstract	<p>Risk Management Measures Catalogue (RMMC)</p> <p>Les tableaux sont publiés en anglais seulement</p> <p>The Clean Water Act requires that the implementation of Risk Management Plans and Prescribed Instrument Policies includes the identification of measures that are known to be effective to some extent to manage or reduce the risk posed by activities which have been prescribed by the province as a threat to drinking water. The Risk Management Measures Catalogue (RMMC) is a compilation of known regulatory standards and best management practices, and was developed to support key stakeholders in gathering information in regards to known practices available in addressing a drinking water threat.</p> <p>The risk management measures included in the RMMC have been evaluated by a number of technical experts from the Ministries of Environment and Climate Change, Natural Resources and Forestry, and Agriculture Food and Rural Affairs, as well as experts from the source protection authorities, municipalities and the private sector. The user of the RMMC is able to select risk management measures for inclusion in risk management plans and relevant instruments in order to ensure that the threat to drinking water is adequately managed.</p> <p>Therefore, users of the RMMC will be applying their professional judgement on determining what particular measure(s) is/are considered to be sufficient to adequately manage a drinking water quality or quantity threat in order to meet the test set out in section 22 the CWA, which is that the threat ceases to be (or never becomes) significant.</p> <p>The catalogue is not intended to provide advice or recommendations in relation to any specific circumstance. Users of the RMMC Website will be applying their professional judgement on determining what particular measure(s) is/are considered to be sufficient to adequately manage a drinking water quality threat. The Province of Ontario and Toronto and Region Conservation Authority assume no liability for the risk management measures selected by the users.</p>
